Engines	<ul style="list-style-type: none"> • 3N requires a declaration of Horsepower to be made that will be subject to Dyno testing at the request of the scrutineer. • 3B A non-stepped hull will be permitted to utilise 2700 CC/150HP (minimum weight penalty (including crew) 860kg. • Non homologated engines are accepted. HP rating is as that given by the manufacturer and engines should not be modified in any form from manufacturer's specifications. • A lower rated base powerhead may be modified to bring it up to a declared horsepower that will be subjected to dyno testing if required.

UKOPRA Class 3 Class Classification Table

Hull Dimensions	<ul style="list-style-type: none"> Hull measurement Class 3A and 3X All hull measurements are to be taken while the boat is ashore. The length must be measured between perpendiculars of the external moulded length of the boat, taken at the extreme bow and the interface between the hull and bracket / engine. Hull extension beyond the transom shall be deemed to be 'fixed trim tabs' and shall not be included in the measured length. When defining "extreme bow", any form that constitutes the bow and its construction and contributes to the performance of the boat shall be included in the measured length. Any other attachment that is added to meet a minimum length requirement shall not be included in the measured length. <p>Boat width: 3A . 0 M - 2.00 M. 3X 1,70 m - 2.10 m</p>
